AI for Recruitment

SESSION 2 SYLLABUS & TRAINER TEACHING GUIDE

Session 2: Module 2 — Prompt Engineering for Recruiters

Batch: AI for Recruitment — Cohort 1 (Flagship) | Lead Trainer: Shesha Shhiv Mohanty | Schedule: Wed, 09 Sept, 2026 (07:00 pm – 09:00 pm IST)

01 Learning Objectives & Session Outcomes

By the end of this session, attendees will have mastered the following practical capabilities and industry frameworks:

- **Master prompt formulas (Role + Context + Task + Constraints + Output) for zero hallucinations.**
- **Master practical, industry-standard execution of Module 2 — Prompt Engineering for Recruiters.**
- **Apply hands-on recruitment workflows from sourcing, screening to candidate closing.**
- **Identify common recruitment bottlenecks and optimize hiring turnaround times (TAT).**

02 Detailed Syllabus Topics & Curriculum Breakdown

• Week 1 / Session 2: Core AI Competencies

- Anatomy of a high-performance recruitment prompt: Role, Context, Task, Constraints & Output format
- Module 2 — Prompt Engineering for Recruiters — Detailed Lecture & Guide
- Advanced techniques: Prompt Chaining, Role-based persona prompting, and Few-Shot prompting
- Prompt refinement & iteration: Eliminating generic corporate jargon from AI outputs
- Building reusable recruiter prompt templates in Notion / Google Sheets / Notes
- Context Window optimization and document uploads for hiring requirements
- Practical Exercise: Assemble your personal 50+ AI Recruitment Prompt Library

03 Trainer Teaching Notes & Paced Talking Points

Trainer Guidance: Follow this structured 2-hour pacing model to balance conceptual clarity with practical hands-on application.

Segment [15 Mins]: Opening & Context Setting

%¶
Welcome students and link today's session on "Module 2 — Prompt Engineering for Recruiters" to the broader recruitment lifecycle.

%¶
Poll the cohort: "How many of you have faced friction or drops at this specific hiring stage?"

%¶
State the concrete business outcome: how mastering this makes a recruiter 3x more productive and hire-ready.

Segment [45 Mins]: Deep-Dive Concept Delivery & Frameworks

%¶
Walk through the step-by-step workflow for Week 1 / Session 2: Core AI Competencies.

%¶
Demonstrate real-time screen sharing: live Boolean strings, intake forms, or ATS pipeline configuration.

%¶
Contrast junior vs. senior recruiter methods: highlight how high-performers avoid time-wasting traps.

Segment [35 Mins]: Live Demonstration & Student Walkthrough

%¶
Execute a live mock demonstration using real candidate profiles or job descriptions.

%¶
Call on 2-3 students to suggest search parameters or candidate objection responses in real time.

%¶
Emphasize compliance, candidate experience, and metric tracking (Submittal-to-Interview ratio).

Segment [25 Mins]: Hands-on Activity, Q&A & Wrap-Up

%¶
Assign the practical exercise below; give students 15 minutes of structured practice.

%¶
Review 2 volunteer submissions and provide immediate tactical critique.

%¶
Announce the attendance-gated assignment/assessment and key action items before next class.

04 Key Concepts, Case Studies & Real-World Scenarios

High-Impact Candidate Conversion & Intake Calibration

Recruiting speed is determined in the first 48 hours. Calibrating the exact must-haves versus good-to-haves with hiring managers prevents weeks of futile sourcing.

> **INDUSTRY EXAMPLE & CASE STUDY:**
> Case Study: A fast-growing tech startup reduced their Time-to-Fill from 42 days to 16 days by implementing 15-minute calibration intake sheets and 3 benchmark profiles before starting active outreach.

Predictive Screening & Eliminating Offer Dropouts

Assessing intent, compensation expectations, and competing offers during early stages ensures only high-probability candidates reach the offer table.

> **INDUSTRY EXAMPLE & CASE STUDY:**
> Case Study: Enterprise IT services firm increased joining ratio from 68% to 89% by embedding counter-offer risk audits and transparent notice period buy-out protocols during initial screening calls.

05 Practical Classroom Activities & Exercises

&¡ Hands-on Lab: Module 2 — Prompt Engineering for Recruiters Live Execution

Instructions: Using the provided job specification / scenario, build the complete deliverable: Anatomy of a high-performance recruitment prompt: Role, Context, Task, Constraints & Output format, Module 2 — Prompt Engineering for Recruiters — Detailed Lecture & Guide, Advanced techniques: Prompt Chaining, Role-based persona prompting, and Few-Shot prompting.

Deliverable: Assemble personal 50+ AI Recruitment Prompt Library ready for daily operations.

07 Check-for-Understanding & Discussion Prompts

Q1. What are the top 3 failure points when recruiters execute "Module 2 — Prompt Engineering for Recruiters", and how do you mitigate them?

Q2. How do you adjust your recruitment strategy when candidate response rate drops below 15%?

Q3. Explain how to measure Return on Effort (ROE) between active outbound sourcing vs. inbound portal applicants.

Q4. Role-play question: How would you handle a hiring manager who insists on unrealistic candidate criteria for an urgent requisition?

08 Session Summary & Post-Class Action Items

- Consistency in execution is what separates average recruiters from top 1% executive talent specialists.
- Always document your candidate communication trail, objection handling points, and submittal feedback in the ATS.
- Complete today's practical assignment and submit it via your student portal before the next live session.
